SHINGLE

Choose a roof
Gerard roofing shingles
made a choice of
durable and

Attractive, unique appearance

Gerard roofing shingles recreate the look of combination shingles - North America's leading roofing type. Advanced pressing technology also gives our shingles a more pronounced three dimensional effect.

A unique, two-tone, shaded stone chip effect is incorporated into each of our shingle profiles.

Sound construction, high durability

Gerard roofing shingles are manufactured from aluminium-zinc coated steel which offers superior protection from the elements. Each panel is first pressed then an acrylic base coat is applied into which natural stone chips are embedded. An acrylic overglaze is then applied as a finishing seal. The underside of each shingle has a protective coating of clear acrylic resin.

Because all Gerard roofing shingle coatings are applied after pressing there are no problems with micro cracking or crazing.

In addition, Gerard roofing shingles make an ideal cladding for cement roofs.

Substantial cost savings

Gerard roofing shingles completely eliminate the need for the expensive plywood substrate normally required for conventional shingles. This can save up to 25% of roofing costs.

Superior wind resistance

Gerard roofing shingles have a unique horizontal fixing system. Because each panel is fixed horizontally to roof battens, wind shear is virtually eliminated. Most other roofing products rely on vertical fixing methods that are prone to lifting in high winds.

Lightweight not deadweight

Gerard roofing shingles are 1/6th the weight of concrete tiles over an equivalent roof area. This means substantial savings can be achieved in a building's structural costs. Lower overhead weight is also safer in earthquake prone areas.

Gerard® Roofing Shingles are available in 5 popular colours

Note:

All colours are blended with subtle shading to enhance the tile profile.
We advise making your final colour choice after viewing a full size shingle or an installed roof.

Technical Information

Pitch:

The interlocking shingle design allows any pitch from 15° minimum to a vertical face.

Nominal Batten Spacing and Ridge Detail

Barge End Detail

Nominal Batten Sizes

Rafters or Truss Centres	Batten Sizes (Nominal)
Recommended up to	
900mm	50x40mm
Optional	
1200mm	50x50mm
1500mm	50x65mm on edge
1800mm	50x75mm on edge
